رفدي — API Reference

Complete Internal API Documentation — 22 Endpoints

For internal developer use only | Version 1.0

Base URL: `https://api.rafdi.com/v1`

Auth Header: `Authorization: Bearer <JWT token>`

Auth

1. POST /auth/register

Description	Register a new company with one or more roles (owner/renter/both). Password is hashed before storage.
Auth	None (public)
Input	`{ "name": "string", "commercialRegistration": "string", "email": "string", "password": "string", "roles": ["owner"] | ["renter"] | ["owner","renter"] }`
Output 200	`{ "message": "Company registered successfully", "companyID": 5 }`
Errors	`400: { "detail": "Email already exists" } 422: { "detail": "Validation error" }`

2. POST /auth/login

Description	Authenticate user. Admin is validated against .env. Companies are validated against MySQL. Returns JWT containing companyID and roles[].
Auth	None (public)
Input	`{ "email": "string", "password": "string" }`
Output 200	`{ "token": "eyJ...", "companyID": 5, "roles": ["owner", "renter"] }`
Errors	`401: { "detail": "Invalid credentials" }`

3. PATCH /auth/profile

Description	Update company profile information. Email uniqueness is validated before update.
Auth	JWT required
Input	`{ "name": "string", "email": "string", "commercialRegistration": "string" }`
Output 200	`{ "message": "Profile updated successfully" }`
Errors	`400: { "detail": "Email already in use" } 401: { "detail": "Unauthorized" }`

Warehouses

4. GET /warehouses

Description	Get all active warehouses (IsActive=1). Supports optional query filters for location and minimum size.
Auth	JWT required
Input	`Query params (optional): location: string min_size: int max_price: decimal`
Output 200	`{ "warehouses": [ { "warehouseID": 1, "name": "string", "location": "string", "size": 500, "pricePerMonth": 2000.00, "imagePath": "string", "companyName": "string" } ] }`
Errors	`401: { "detail": "Unauthorized" }`

5. GET /warehouses/{id}

Description	Get full details of a single warehouse by ID including owner company info.
Auth	JWT required
Input	`Path param: id (int)`
Output 200	`{ "warehouseID": 1, "name": "string", "location": "string", "size": 500, "pricePerMonth": 2000.00, "description": "string", "imagePath": "string", "isActive": true, "ownerCompany": "string" }`
Errors	`404: { "detail": "Warehouse not found" }`

6. POST /warehouses

Description	Create a new warehouse listing. Accepts multipart/form-data including image upload. Validates no negative values.
Auth	JWT required (Owner role)
Input	`multipart/form-data: name: string location: string size: int (> 0) pricePerMonth: decimal (> 0) description: string image: file (optional)`
Output 200	`{ "message": "Warehouse created", "warehouseID": 7 }`
Errors	`400: { "detail": "Validation error" } 403: { "detail": "Owner role required" }`

7. PATCH /warehouses/{id}

Description	Update warehouse details. Only the owner of the warehouse can update it.
Auth	JWT required (Owner role)
Input	`{ "name": "string", "location": "string", "size": int, "pricePerMonth": decimal, "description": "string" }`
Output 200	`{ "message": "Warehouse updated" }`
Errors	`403: { "detail": "Not your warehouse" } 404: { "detail": "Warehouse not found" }`

8. PATCH /warehouses/{id}/toggle

Description	Toggle warehouse IsActive status. Only the owner can toggle their own warehouse.
Auth	JWT required (Owner role)
Input	`Path param: id (int) No body required`
Output 200	`{ "message": "Status updated", "isActive": false }`
Errors	`403: { "detail": "Not your warehouse" }`

Bookings

9. POST /bookings

Description	Create a new booking. Validates date overlap with existing confirmed bookings. Calculates base price, renter commission (5%), and owner commission (7%).

Auth	JWT required (Renter role)
Input	`{ "warehouseID": 1, "startDate": "2025-06-01", "endDate": "2025-08-31" }`
Output 200	`{ "bookingID": 12, "basePrice": 6000.00, "renterCommission": 300.00, "totalDue": 6300.00, "ownerReceives": 5580.00 }`
Errors	`409: { "detail": "Dates overlap with existing booking" } 403: { "detail": "Renter role required" }`

10. GET /bookings/my

Description	Get all bookings for the authenticated company. Returns bookings as owner or renter depending on active role context.
Auth	JWT required
Input	`Query params (optional): role: "owner" | "renter" status: "pending" | "confirmed" | "cancelled"`
Output 200	`{ "bookings": [ { "bookingID": 12, "warehouseName": "string", "startDate": "string", "endDate": "string", "totalPrice": 6300.00, "status": "confirmed", "paymentStatus": "paid" } ] }`
Errors	`401: { "detail": "Unauthorized" }`

11. PATCH /bookings/{id}/status

Description	Update booking status. Used by Admin to intervene in disputed bookings.
Auth	JWT required (Admin role)
Input	`{ "status": "confirmed" | "cancelled" }`
Output 200	`{ "message": "Booking status updated", "bookingID": 12, "status": "cancelled" }`
Errors	`403: { "detail": "Admin role required" } 404: { "detail": "Booking not found" }`

Payments

12. POST /payments

Description	Process payment for a confirmed booking via Moyasar gateway. On success, updates payment status to Paid and triggers notifications.

Auth	JWT required (Renter role)
Input	`{ "bookingID": 12, "cardholderName": "string", "cardNumber": "string", "expiryDate": "MM/YY", "cvv": "string" }`
Output 200	`{ "message": "Payment successful", "paymentID": 8, "amount": 6300.00, "status": "paid" }`
Errors	`402: { "detail": "Payment failed — card declined" } 404: { "detail": "Booking not found" }`

13. GET /payments/{bookingID}

Description	Get payment details for a specific booking including commission breakdown.
Auth	JWT required
Input	`Path param: bookingID (int)`
Output 200	`{ "paymentID": 8, "bookingID": 12, "basePrice": 6000.00, "renterCommission": 300.00, "ownerCommission": 420.00, "totalPaid": 6300.00, "ownerReceives": 5580.00, "platformEarnings": 720.00, "status": "paid", "paymentDate": "2025-05-01" }`
Errors	`404: { "detail": "Payment not found" }`

Notifications

14. GET /notifications

Description	Get all notifications for the authenticated user ordered by date. Returns unread count.
Auth	JWT required
Input	`No body required`
Output 200	`{ "unreadCount": 3, "notifications": [ { "notificationID": 1, "type": "booking_confirmed", "message": "string", "isRead": false, "createdAt": "string" } ] }`
Errors	`401: { "detail": "Unauthorized" }`

15. PATCH /notifications/{id}/read

Description	Mark a specific notification as read.

Auth	JWT required
Input	`Path param: id (int) No body required`
Output 200	`{ "message": "Notification marked as read" }`
Errors	`404: { "detail": "Notification not found" }`

16. PATCH /notifications/read-all

Description	Mark all notifications as read for the authenticated user.
Auth	JWT required
Input	`No body required`
Output 200	`{ "message": "All notifications marked as read" }`
Errors	`401: { "detail": "Unauthorized" }`

Admin

17. GET /admin/companies

Description	Get all registered companies with their roles and status. Supports filtering by status.
Auth	JWT required (Admin role)
Input	`Query params (optional): status: "pending" | "approved" | "rejected" | "suspended"`
Output 200	`{ "companies": [ { "companyID": 5, "name": "string", "commercialRegistration": "string", "roles": ["owner"], "status": true, "createdAt": "string" } ] }`
Errors	`403: { "detail": "Admin role required" }`

18. PATCH /admin/companies/{id}/status

Description	Enable or disable a company account. Companies are active (Status=true) by default. Admin can disable at any time.
Auth	JWT required (Admin role)
Input	`{ "status": true | false }`

Output 200	`{ "message": "Company status updated", "companyID": 5, "status": false }`
Errors	`403: { "detail": "Admin role required" } 404: { "detail": "Company not found" }`

19. GET /admin/warehouses

Description	Get all warehouses on the platform regardless of active status. Includes owner company info.
Auth	JWT required (Admin role)
Input	`Query params (optional): isActive: bool`
Output 200	`{ "warehouses": [ { "warehouseID": 1, "name": "string", "ownerCompany": "string", "location": "string", "size": 500, "pricePerMonth": 2000.00, "isActive": true } ] }`
Errors	`403: { "detail": "Admin role required" }`

20. GET /admin/bookings

Description	Get all bookings across the platform with full commission breakdown. Supports filtering by status.
Auth	JWT required (Admin role)
Input	`Query params (optional): status: "pending" | "confirmed" | "cancelled"`
Output 200	`{ "bookings": [ { "bookingID": 12, "renterCompany": "string", "warehouseName": "string", "startDate": "string", "endDate": "string", "basePrice": 6000.00, "renterCommission": 300.00, "ownerCommission": 420.00, "platformEarnings": 720.00, "status": "confirmed", "paymentStatus": "paid" } ] }`
Errors	`403: { "detail": "Admin role required" }`

21. GET /admin/dashboard

Description	Get platform statistics for the Admin dashboard including total companies, warehouses, bookings, and revenue.
Auth	JWT required (Admin role)
Input	`No body required`
Output 200	`{ "totalCompanies": 45, "totalWarehouses": 120, "totalBookings": 380, "totalRevenue": 54000.00, "pendingApprovals": 3 }`

Errors	`403: { "detail": "Admin role required" }`
